## 1. Outline

NACHI ROBOT has used mechatronic techniques, cultivated throughout the last few decades, to supply robots suited multi-purpose for industries utilizing welding, spray painting and the material handling techniques.

The MC robot is a 6 axes robot that has characteristics like listed as below.

- Simple structure
- High speed
- High accuracy
- Suitable for material handling applications

Installation	Arm type Load weight	Standard arm 20 kg (Max.22Kg)	Long arm 10 kg	Short arm 12 kg
Floor mount Inverted mount		MC20-01 MC20-03	MC10L-01 MC10L-03	MC12S-01 MC12S-03 (*1)
Wall mount		×	×	

\*1; If wall mount is selected, wall mount option (OP-S7-010) is necessary.

### ■ Characteristic

1. This robot is designed so that the size of the motion range is similar to that of one worker. Therefore, it becomes possible to make a compact robot cell. And, this robot is also suitable for a loading application for randomly workpieces.
2. The wide motion range lightens the limitation of the actual motion range. And examining applicability becomes easier than before.
3. The wrist and the main body become "Dust-proof / Drip-proof performance (IP65 corresponding)", and the application that can be applied has extended.
4. The motion range suitable for the weight of the workpieces or tools can be selected. Because of this, it becomes possible to use a heavier workpiece, double hand, etc.

## 2. Basic specifications

Item		Specifications				
Robot model		MC20-01 MC20-03 *8	MC10L-01 MC10L-03 *7	MC12S-01 MC12S-03 *9		
Construction	Articulated					
Number of axis	6					
Drive system	AC servo motor					
Max. working envelope	Axis 1	$\pm 3.14$ rad ( $\pm 180^\circ$ ) *4				
	Axis 2	$+1.05 \sim -2.53$ rad ( $+60 \sim -145^\circ$ ) *4				
	Axis 3	$+4.22 \sim -2.84$ rad ( $+242 \sim -163^\circ$ )		$+4.22 \sim -2.69$ rad *4 ( $+242 \sim -154^\circ$ )		
	Axis 4	$\pm 3.14$ rad ( $\pm 180^\circ$ ) *4				
	Axis 5	$\pm 2.42$ rad ( $\pm 139^\circ$ ) *4				
	Axis 6	$\pm 6.28$ rad ( $\pm 360^\circ$ ) *4				
Max. speed	Axis 1	2.96 rad/s (170 °/s)	2.62 rad/s (150 °/s)	3.49 rad/s (200 °/s)		
	Axis 2	2.96 rad/s (170 °/s)				
	Axis 3	2.96 rad/s (170 °/s)				
	Axis 4	6.28 rad/s (360 °/s)		6.46 rad/s (370 °/s)		
	Axis 5	6.28 rad/s (360 °/s)		6.46 rad/s (370 °/s)		
	Axis 6	10.5 rad/s (600 °/s)		12.2 rad/s (700 °/s)		
Max. pay load *1	20 kg (Max. 22 kg)		10 kg	12 kg		
Allowable static load torque	Axis 4	49 N·m	24.5 N·m	28 N·m		
	Axis 5	49 N·m	24.5 N·m	28 N·m		
	Axis 6	23.5 N·m	12 N·m	13 N·m		
Allowable moment of inertia *2	Axis 4	1.6 kg·m <sup>2</sup>	1.6 kg·m <sup>2</sup>	1.3 kg·m <sup>2</sup>		
	Axis 5	1.6 kg·m <sup>2</sup>	1.6 kg·m <sup>2</sup>	1.3 kg·m <sup>2</sup>		
	Axis 6	0.8 kg·m <sup>2</sup>	0.7 kg·m <sup>2</sup>	0.47 kg·m <sup>2</sup>		
Position repeatability *3	$\pm 0.06$ mm					
Maximum air pressure	Not more than 0.49 MPa (5.0 kgf / cm <sup>2</sup> )					
Installation	Floor mount, Inverted mount		Floor mount, Inverted mount, Wall mount *4			
Ambient conditions	Temperature: 0 to 45 °C *5 Humidity: 20 to 85%RH (No dew condensation allowed) Vibration to the installation face: Not more than 0.5G (4.9 m/s <sup>2</sup> )					
Dust-proof / Drip-proof performance *6	IP65 equivalent (dust and drain proof-type)					
Robot mass	220 kg	225 kg	210 kg (Wall mount *4; 330 Kg)			

1 [rad] =  $180 / \pi$  [°], 1 [N·m] = 1 / 9.8 [kgf·m]

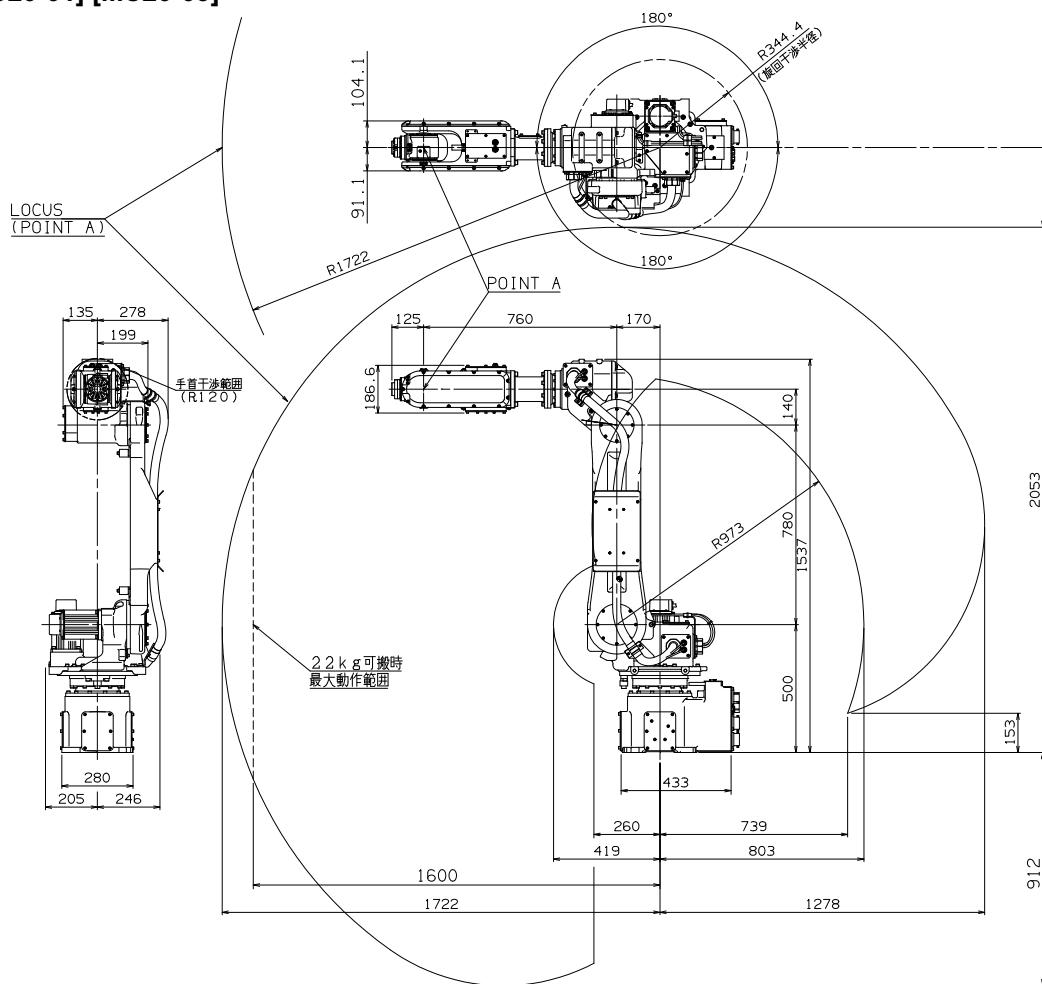

- On controller display, axis 1 to 6 is displayed J1 to J6 for each.

- The specification and externals described in this specifications might change without a previous notice for the improvement.

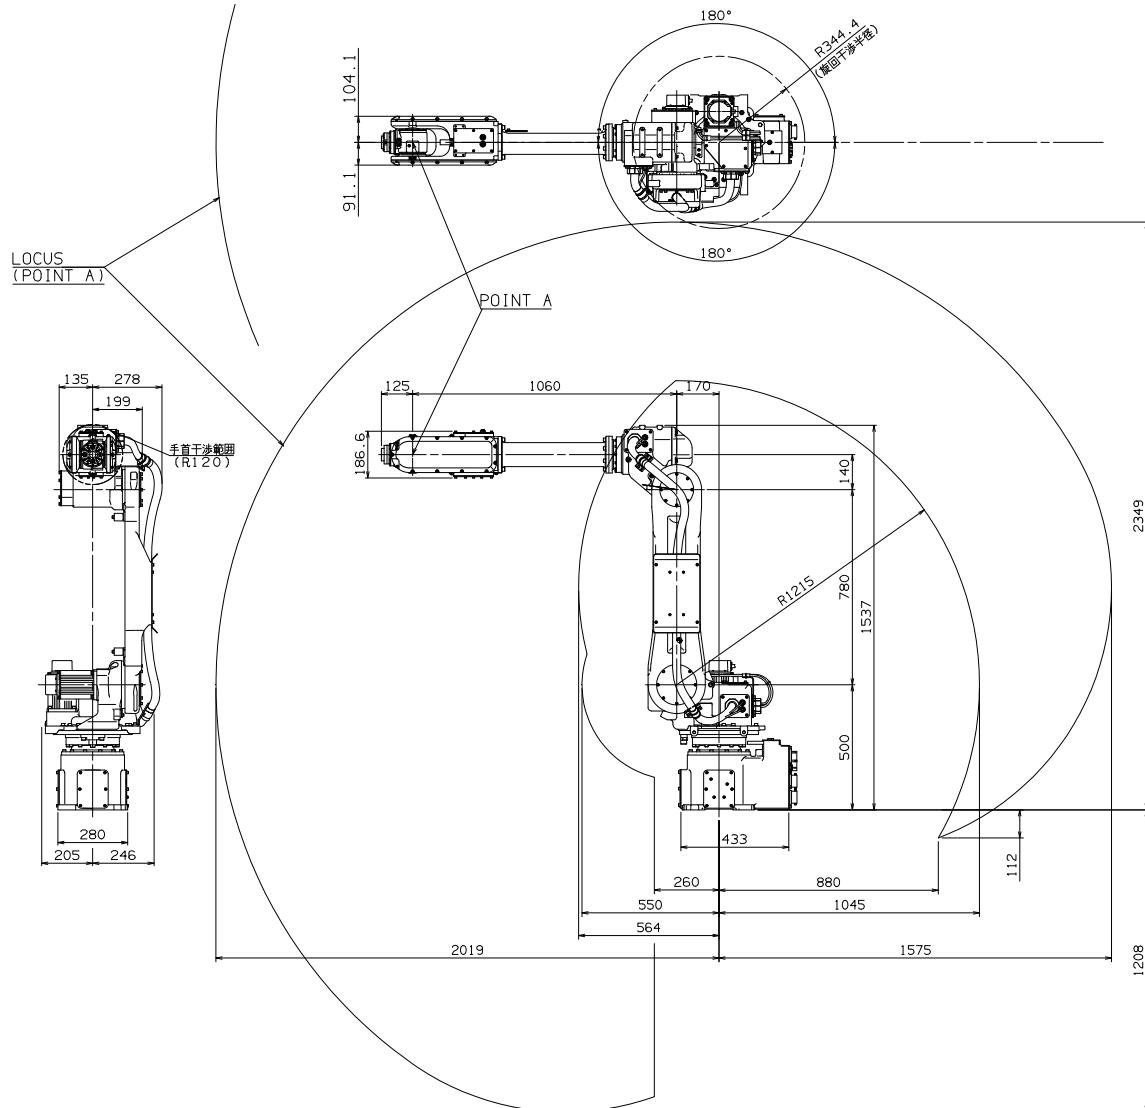

\*1: Operating range is limited according to the payload weight. \*2: The Allowable moment of inertia of a wrist changes with load conditions of a wrist. \*3: This value conforms to "JIS B 8432" standard. \*4: If wall mount is selected, wall mount option (OP-S7-010) is necessary. Working envelope and robot mass is different from those of floor mount and inverted mount. Please refer to "3 Robot dimensions and working envelope" for detail. \*5: Permitted height is not higher than 1,000m above sea level. If used in higher place, permitted temperature is affected by height. \*6: Liquid such as organic compound, acidity, alkalinity, chlorine or gasoline cutting fluid which deteriorates the seal material are not available to use. \*7\*8\*9: MC20-03 has Ethernet cable in arm, based on MC20-01. (Same as MC10L-03 based on MC10S-01, MC12S-03 based on MC12S-01).

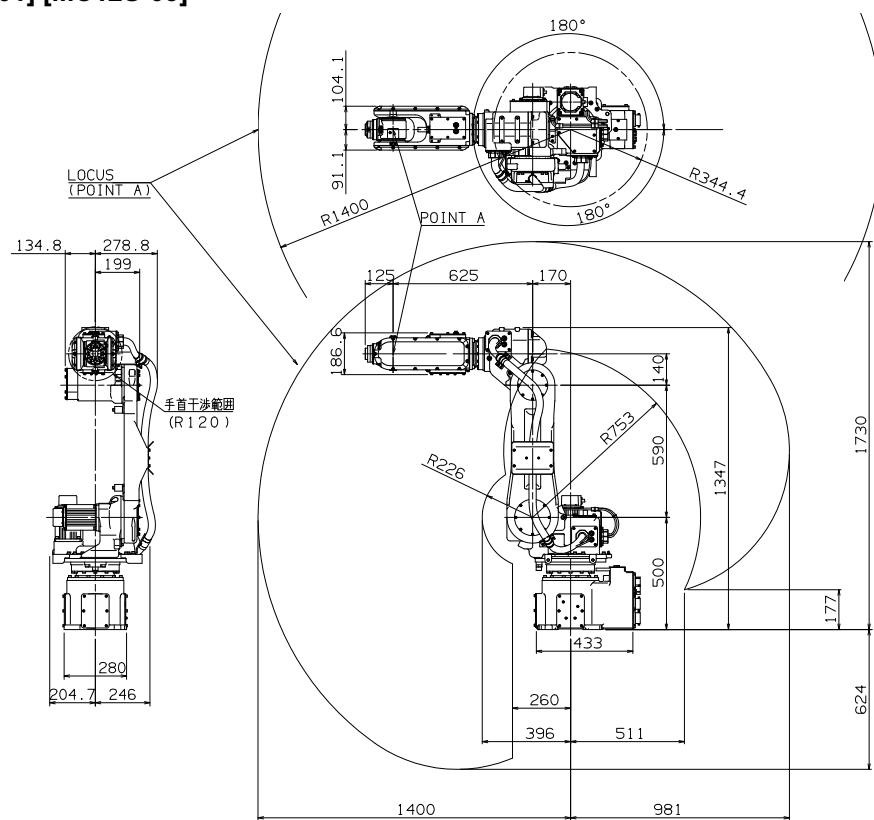

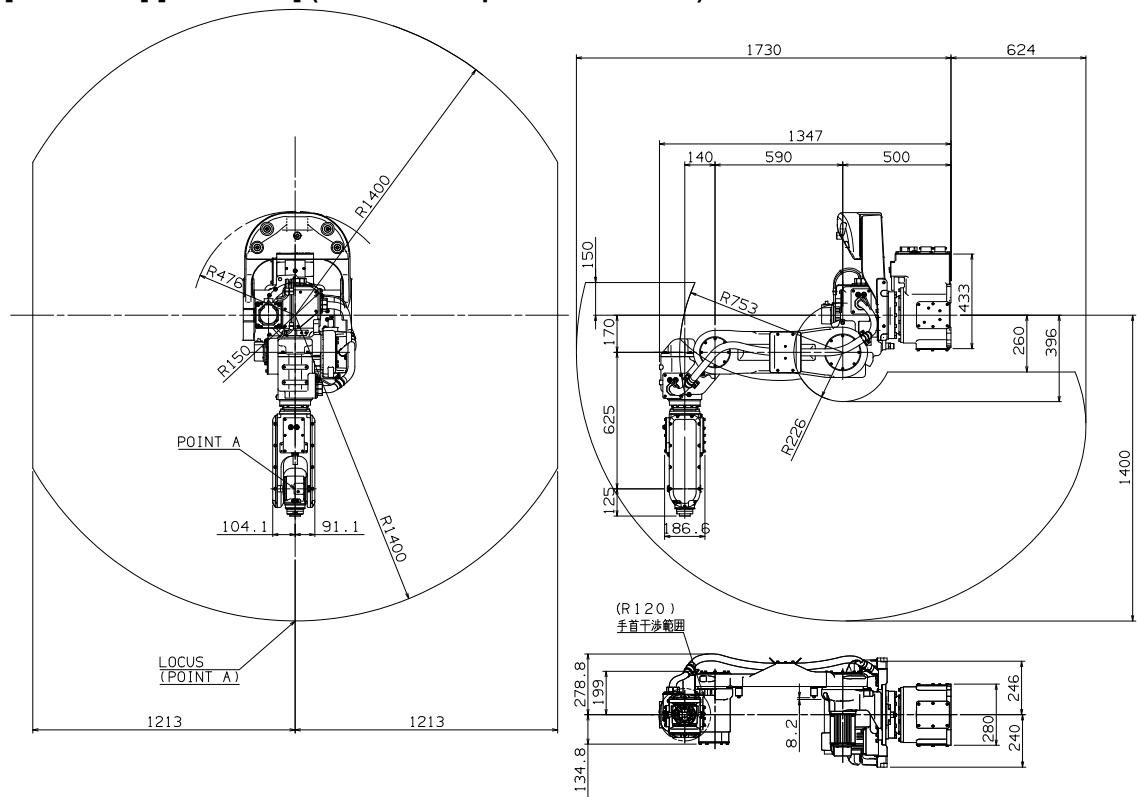

### 3. Robot dimensions and working envelope

## 4. Detail of load mounting plate

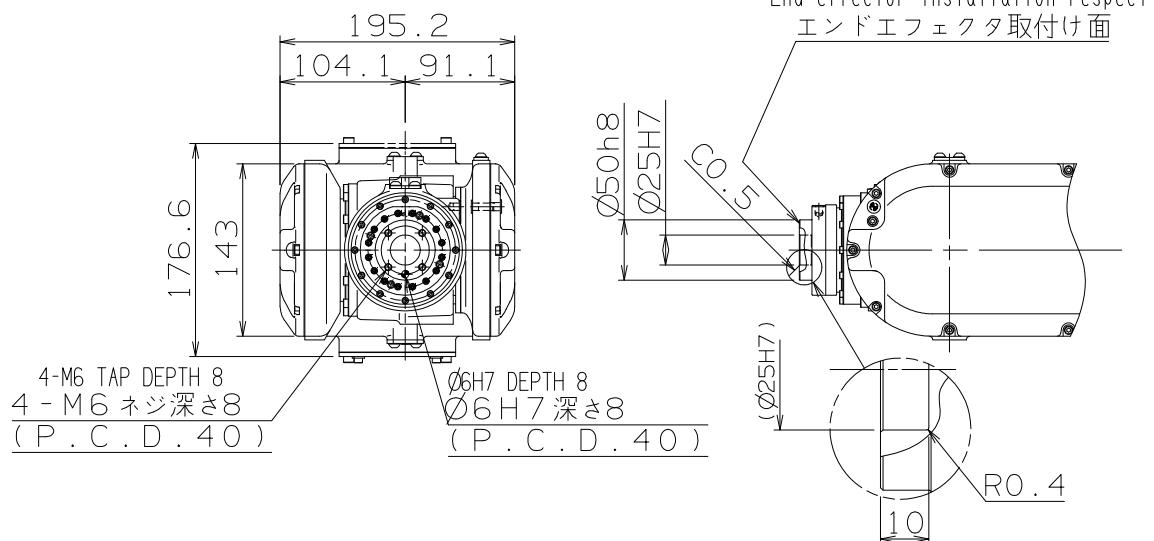

### ■ Wrist

For the end effector fixing bolts, use the mounting P.C.D. shown in following figure.

**CAUTION** Don't screw in installation bolts (M6) over thread tap depth. Installation bolts over thread tap depth may damage the wrist.

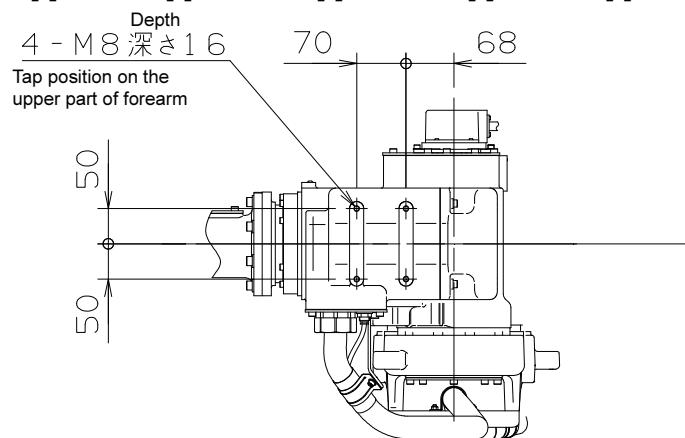

[MC20-01] [MC20-03] [MC10L-01] [MC10L-03] [MC2S-01] [MC2S-03]

### ■ Upper part of forearm

Ancillary equipment can be mounted to the upper part of robot forearm.

[MC20-01] [MC20-03] [MC10L-01] [MC10L-03] [MC2S-01] [MC2S-03]

## 5. Installation Procedure

The installation location and the installation procedure of the robot are critical factors to maintain robot functions. The ambient conditions of installation location not only have influence on the life of mechanical sections of the robot, but also get involved in safety issues. Consequently, strictly observe the environmental conditions shown below. Furthermore, utmost care should be exerted for the installation procedure and the foundation for the robot in order to maintain the robot performance. Strictly observe the installation procedure for the robot provided below.

### Installation

To install the robot, give it first priority to thoroughly consider safety of workers and take safety measures. The following describes precautions for this purpose.

#### Safety measures against entry in the robot operating area

 WARNING	While the robot is in operation, workers are in danger of coming in contact with the robot. To avoid that, install a <b>guard fence</b> so as to keep the worker away from the robot. Not doing so will cause the workers or other persons to accidentally enter the operating area, thus resulting in accidents.
--	---

#### ■ Installation location and ambient conditions

Conditions (temperature, humidity, height and vibration) are written in "2. Basic Specifications". Further ambient conditions listed below must be observed.

- (1) Location with the drainage structure so that swivel base is not flooded, when the liquid such as water or cutting fluid is splashed on the robot body
- (2) Location with no flammable or corrosive fluid or gas.
- (3) Type D grounding (the grounding resistance is  $100\Omega$  or less) is necessary.

#### ■ Installation procedure

While robot moves, large reaction force is applied to the swiveling base from all directions. Consequently, the robot should be installed in such a manner that the foundation endures reaction force caused by accelerating or decelerating the speed to lock the robot, not to mention that it endures static loads.

Repair uneven spots, cracks, and others on the floor, and then install the robot by following to the table below. If thickness of floor concrete is less than needed level, an independent foundation should be constructed. Inspect the foundation prior to the robot installation, and then construct the foundation, if necessary.

Robot Model	All
Thickness of floor concrete	Not less than 150 mm
Installation parts *1	4 bolts of M16 X 45 (JIS: Strength class 12.9) 4 plain washers of not less than 4.5 mm in thickness and HRC35 in hardness
Tightening torque *2	$287 \pm 30 \text{ N}\cdot\text{m}$
Allowable repeated tensile *3	Approximately 10,512 N

\*1 : Installation parts are not accessory of robot.

\*2 : Apply a coating of lubricating oil to the threaded parts of bolts, and then tighten bolts by using torque wrench to the specified tightening torque.

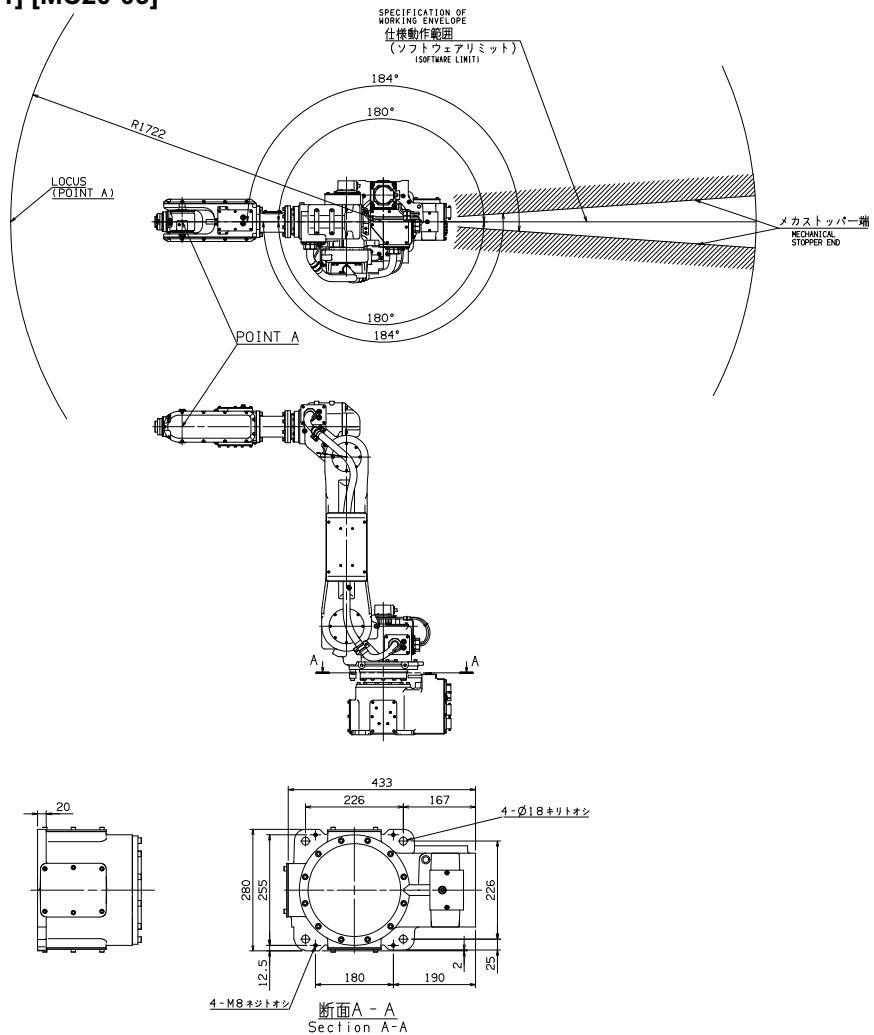

\*3 : This tensile is per installation bolt when robot is installed with all bolts written in table above.

### ■ Installation space

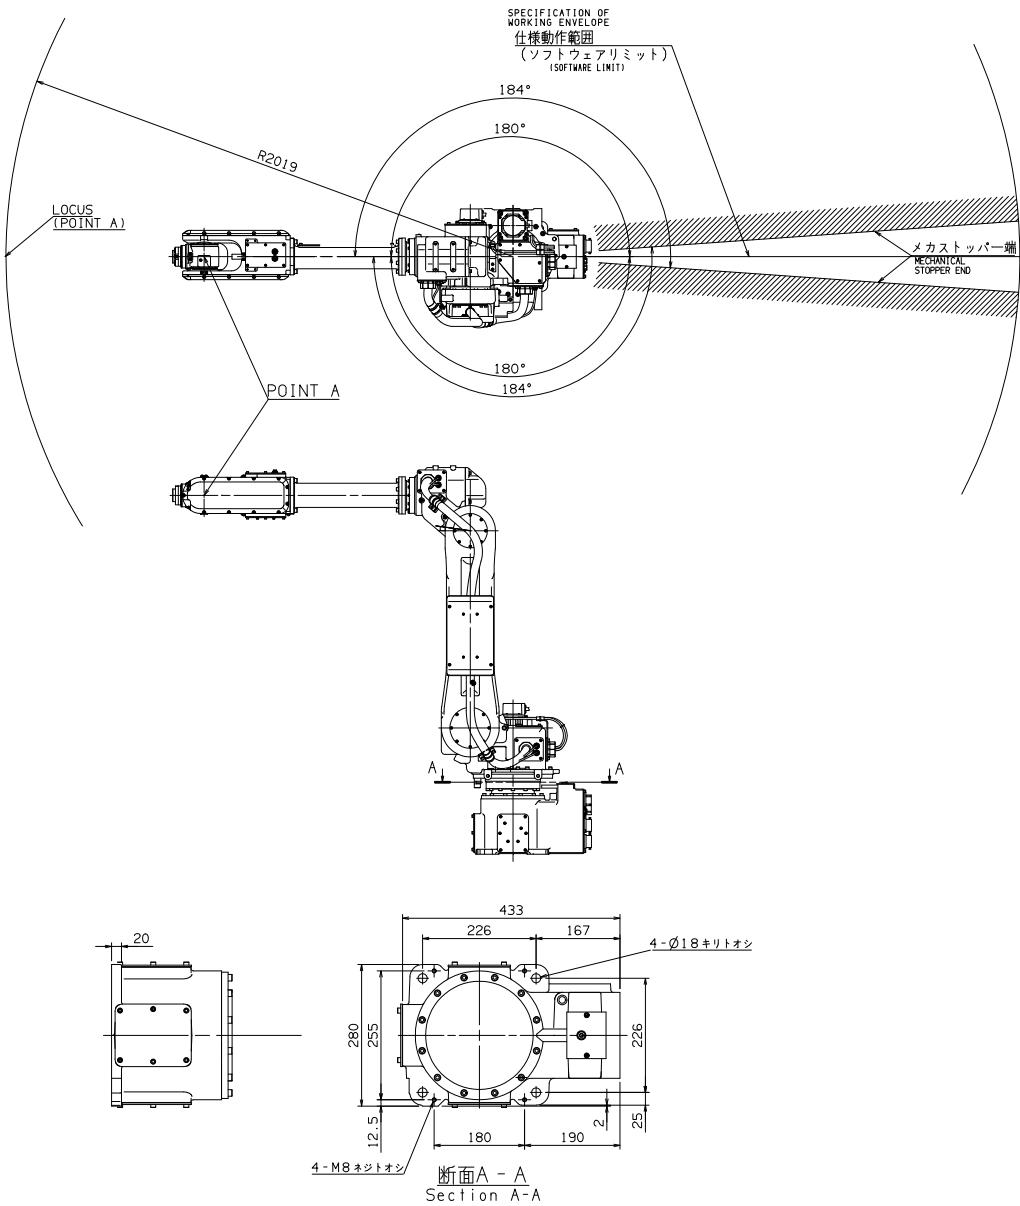

To install the robot, fix the swiveling base of the robot.

 <b>WARNING</b>	A mechanical stopper is mounted 4 degrees over the axis 1 working envelope (software limit). When installing a guard fence (safety fence), please make sure to consider the motion range, wrist posture, and the shape of the end effector.
 <b>WARNING</b>	To operate safely, range of the motion can be restricted in axis 1, axis 2 and axis 3 (Option). Because the option parts are always necessary to restrict the motion range, do not move the standard parts (mechanical stopper block etc.) alone.

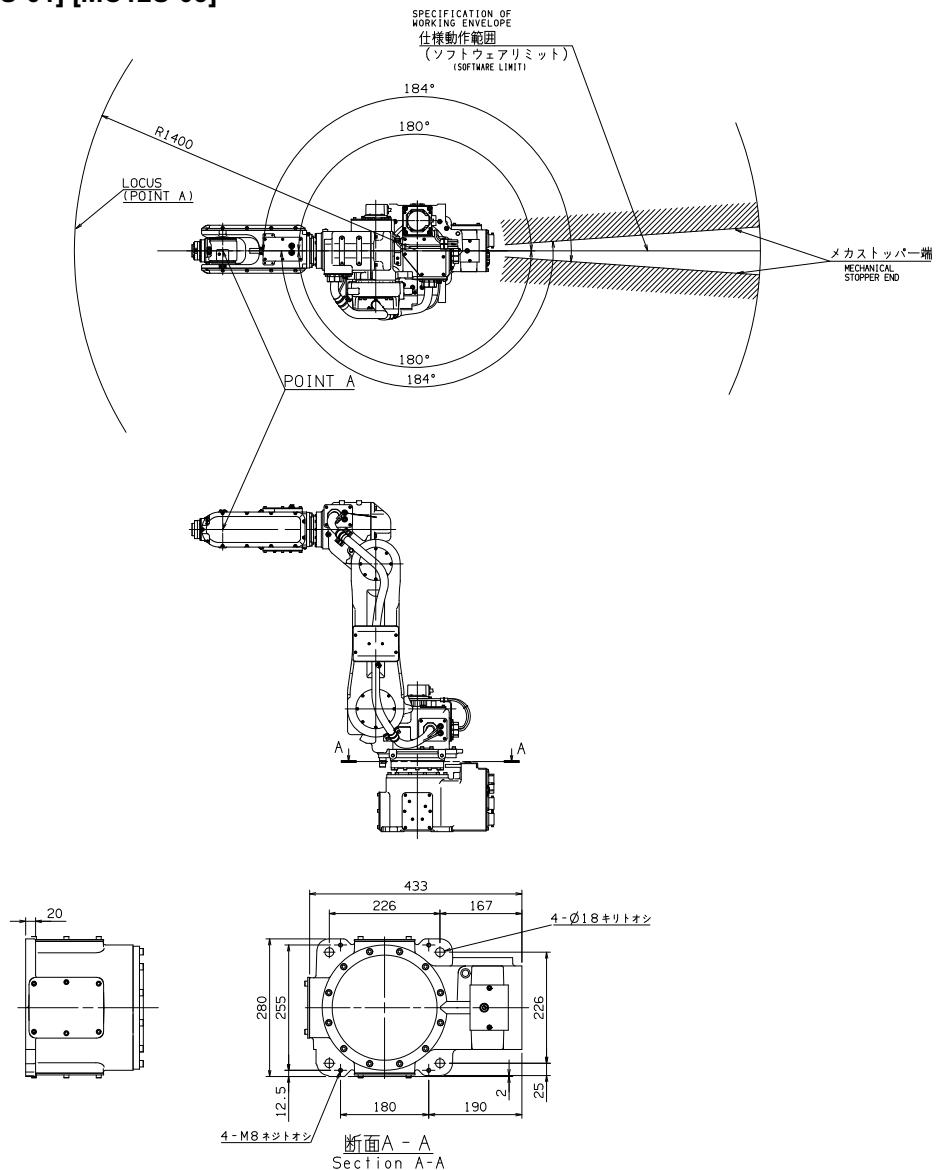

[MC20-01] [MC20-03]

## [MC10L-01] [MC10L-03]

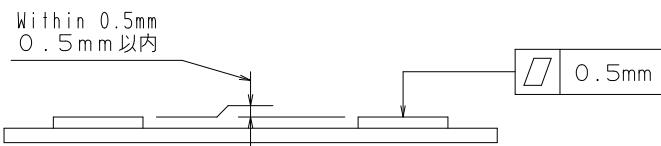

## [MC12S-01] [MC12S-03]

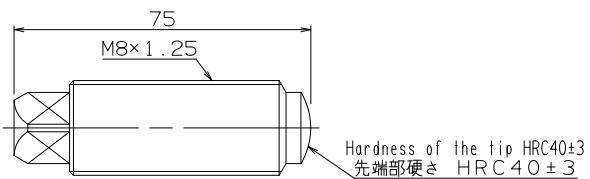

### ■ Accuracy of installation surface

When installing robot, strictly observe precautions listed below to cause no deformation in the swivel base.

- (1) Make the deviation from the flatness of the 4 plates on the robot installation surface fall within 0.5 mm.
- (2) Make the deviation in height between the 4 places of each base plate installation surface and the robot installation surface fall in the range of 0.5 mm ( $\pm 0.25$  mm).

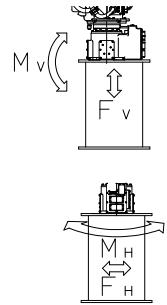

- (3) If the two precautions above cannot be observed, use jack bolts to bring the four places into even contact with the installation surface.

### ■ Maximum Robot Generative Force

Robot type	Maximum vertical generative force FV	Maximum horizontal generative force FH	Maximum Vertical generative moment MV	Maximum horizontal generative moment MH
All	8,300 N	6,000 N	9,400 N·m	8,100 N·m

## 6. Allowable load

CAUTION

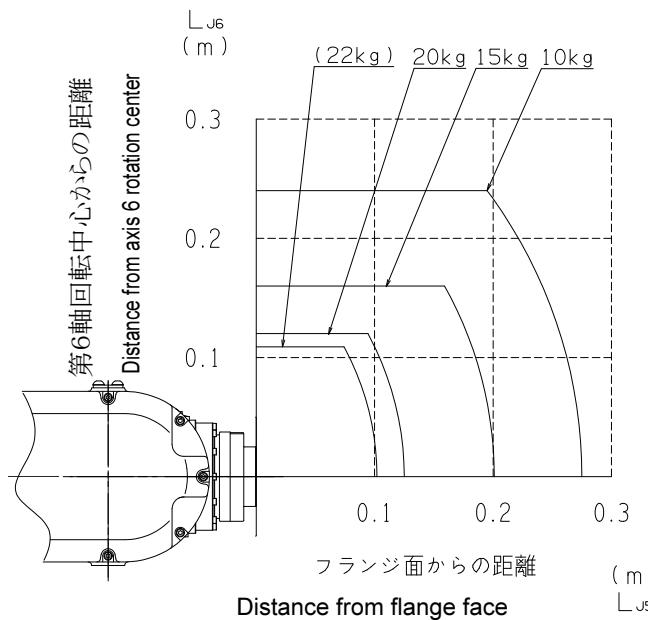

Load fixed on the tip of wrist is regulated by "allowable payload mass", "allowable static load torque", and "allowable moment of inertia". Strictly keep the wrist load within each allowable value. If wrist load exceeds the allowable value, this robot is out of guarantee.  
Refer to the table of "2 Basic specifications" and following figures for the detail of each specification.

### ■ Torque map for the wrist load

C.O.G. of wrist load should exist inside the range shown below.

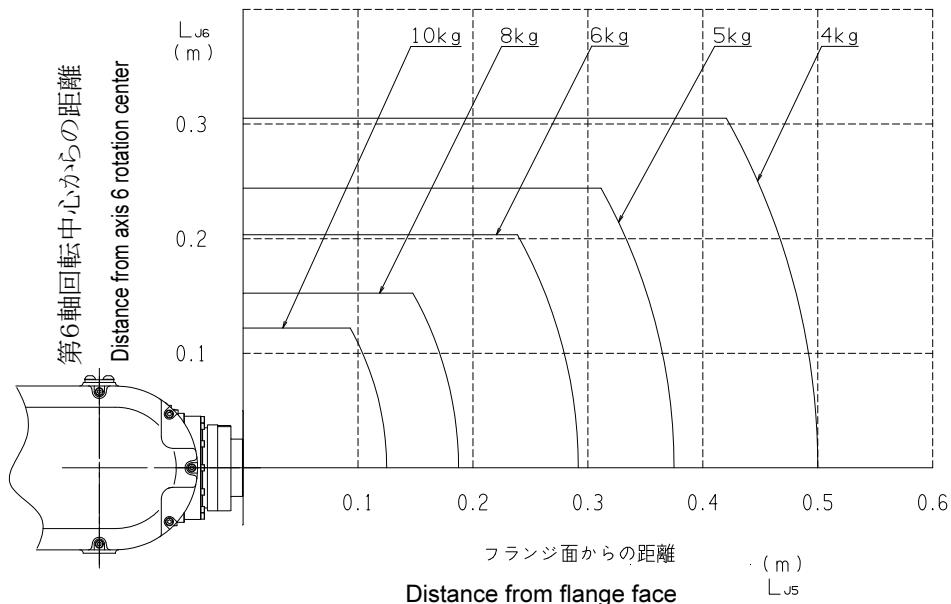

[MC20-01]

[MC20-03]

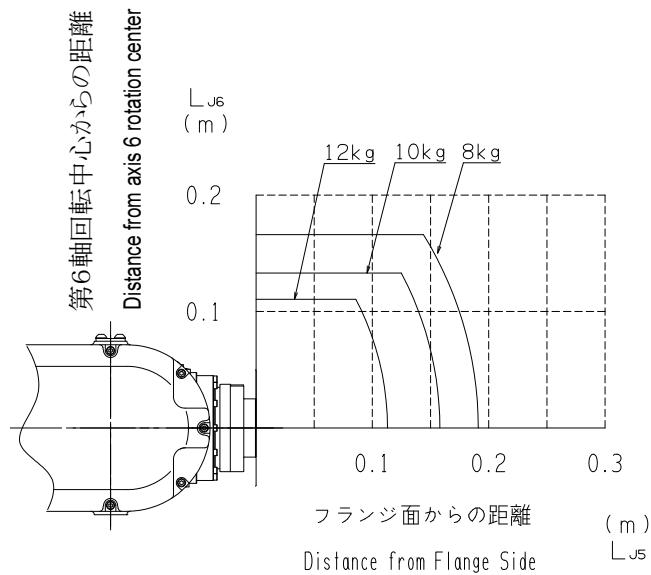

[MC10L-01]

[MC10L-03]

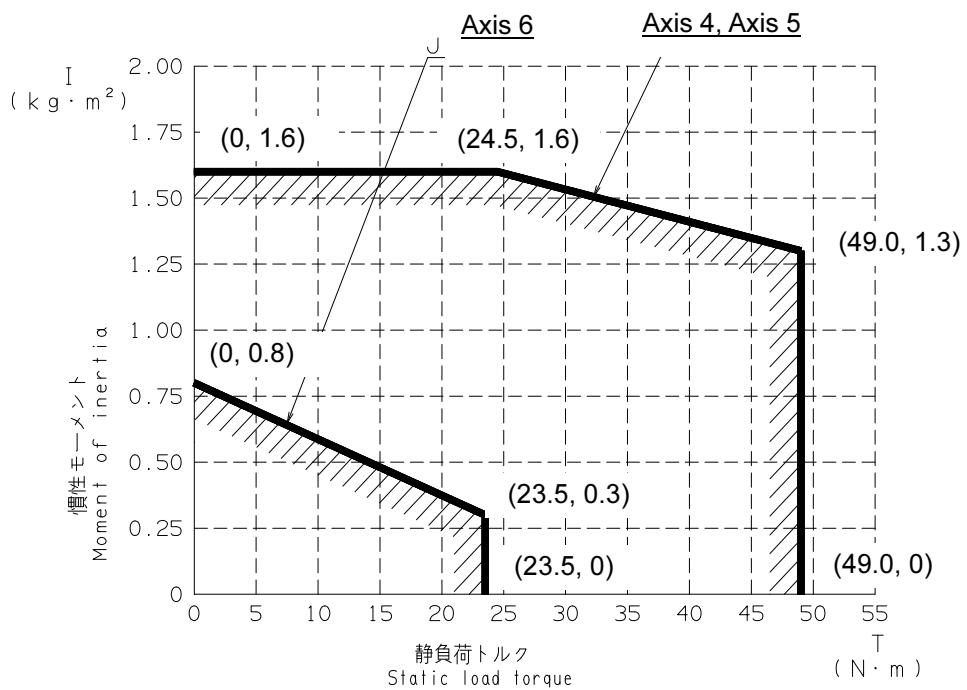

[MC12S-01]  
[MC12S-03]

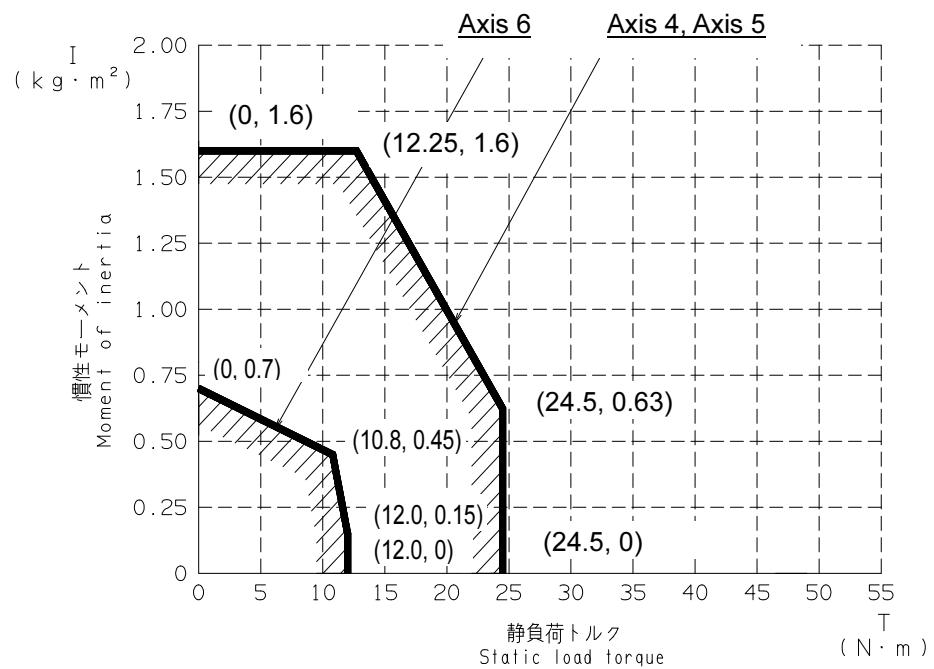

#### ■ Inertia map for the wrist load

Static load torque and moment of inertia of wrist load should exist inside the range shown below.

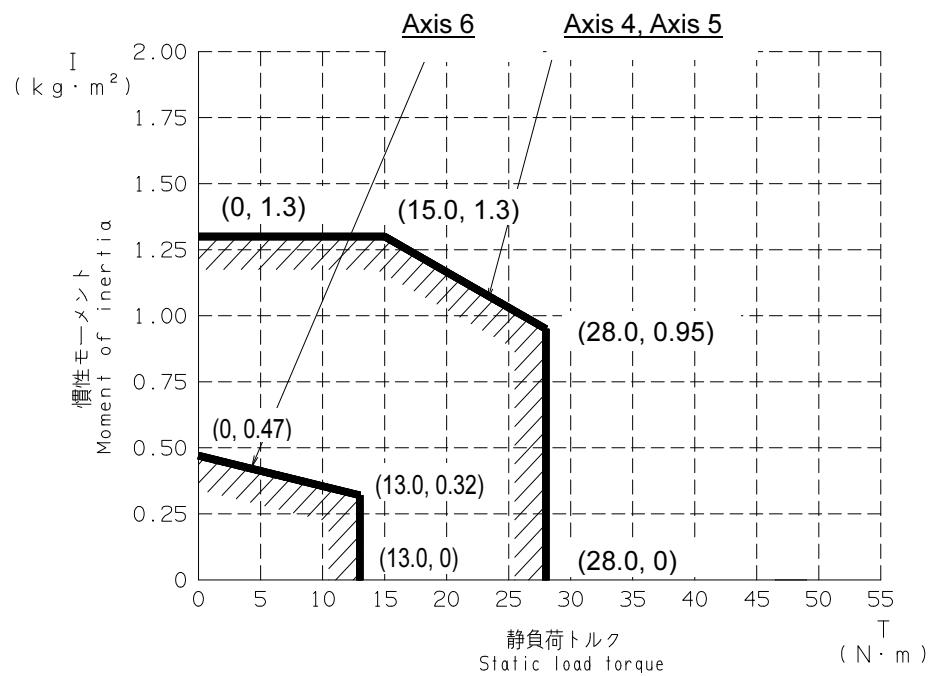

[MC20-01]  
[MC20-03]

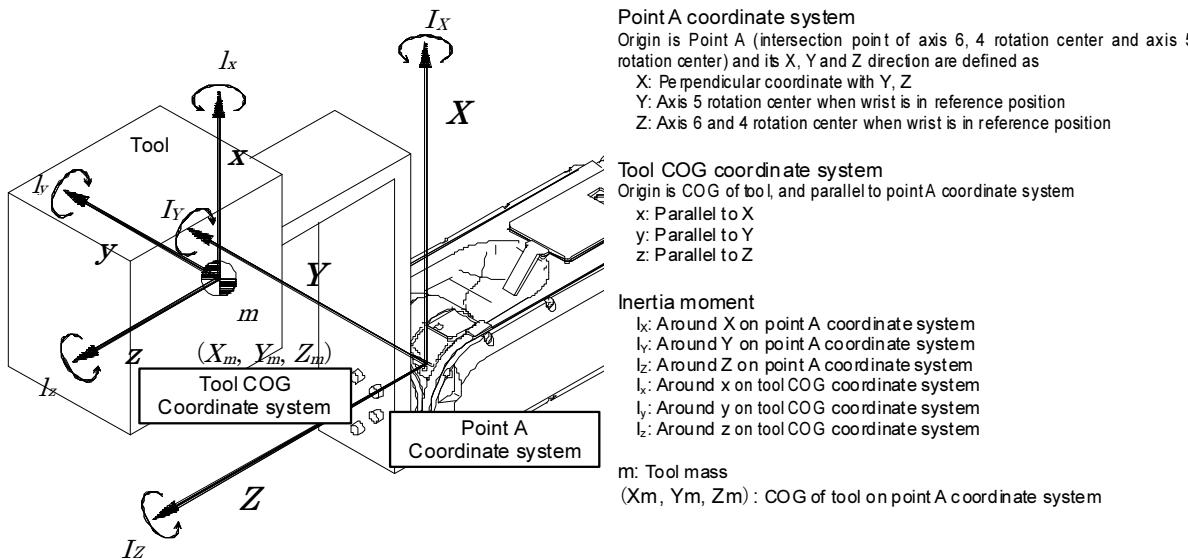

[MC10L-01]  
[MC10L-03]

[MC12S-01]  
[MC12S-03]

## ■ How to calculate inertia moment of wrist axes

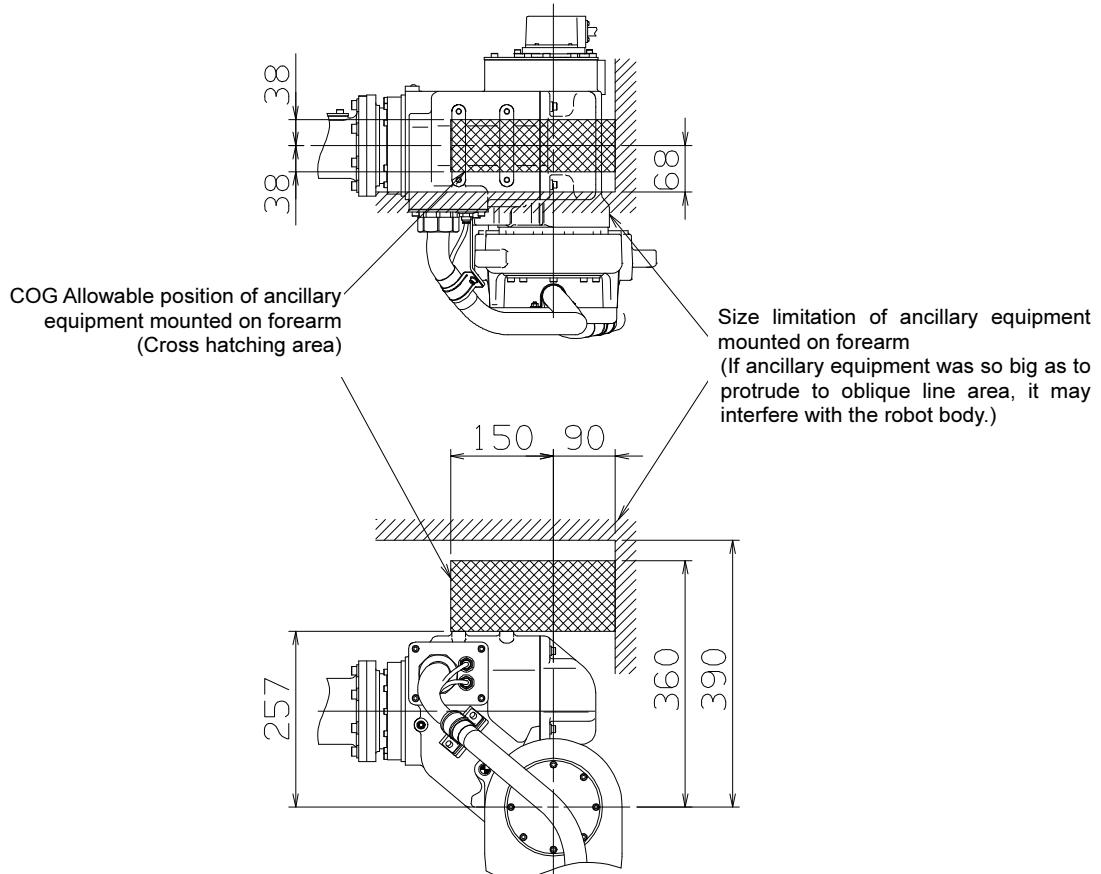

<p><b>1</b> Calculate inertia moment defined on tool COG coordinate system (<math>xyz</math>). If tool is regarded as prism, it is calculated as right formula.</p>	<p>Inertia moment example on tool COG coordinate system If tool is regarded as prism</p> $I_x = \frac{1}{12}m \cdot (A^2 + B^2)$ $I_y = \frac{1}{12}m \cdot (A^2 + C^2)$ $I_z = \frac{1}{12}m \cdot (B^2 + C^2)$ <p>These values (<math>I_x, I_y, I_z</math>) are registered to controller.</p> <p><b>Tool Constants</b> SRA166-01 TOOL1 Tool Name: TOOL_1 Length (mm): x 0.0 y 0.0 z 1 Angle (deg): x 0.0 y 0.0 z 0 C of G (mm): x 0.0 y 0.0 z 0 Weight (kg): 166.0 Inertia (kg/m²): x 88.90 y 88.90 z 44.10 Max. torque (Nm): 0.6</p> <p><b>Inertia moment on tool COG coordinate system</b></p> <p>This is different from "allowable moment of inertia" written in robot specification sheet.</p>
<p><b>2</b> Calculate inertia moment defined on point A coordinate system (<math>XYZ</math>), then calculate inertia moment around robot wrist joint (axis 4, 5 and 6).  This result must not be larger than "Allowable moment of inertia" written in robot specification sheet.</p>	<p>Inertia moment on point A coordinate system (<math>XYZ</math>) is</p> $I_X = m \cdot (Y_m^2 + Z_m^2) + I_x$ $I_Y = m \cdot (X_m^2 + Z_m^2) + I_y$ $I_Z = m \cdot (X_m^2 + Y_m^2) + I_z$ <p>Axis 4 and 5 inertia moment is larger value of <math>I_X</math> and <math>I_Y</math>, because this depends on axis 6 position. Axis 6 inertia moment is <math>I_Z</math> itself.</p> $I_{J4} = I_{J5} = \max (I_X, I_Y)$ $I_{J6} = I_Z$

### ■ Load on the forearm

Ancillary equipment can be mounted to the upper part of robot forearm.

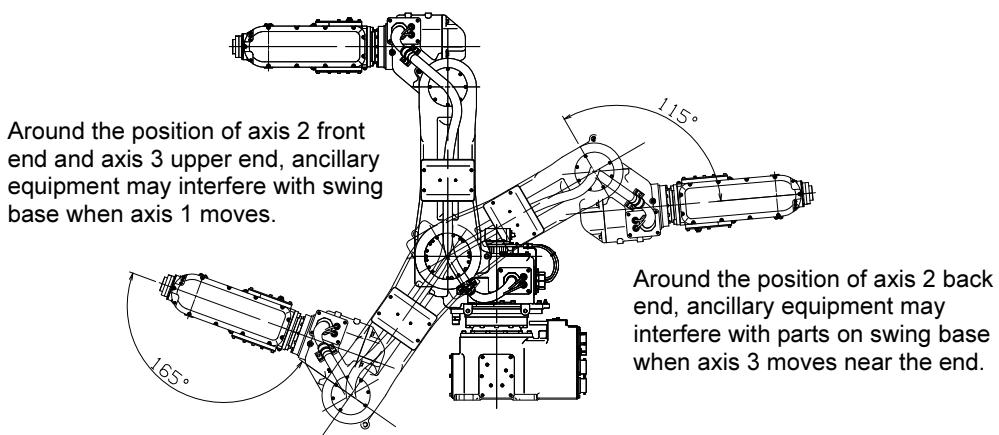

**[MC20-01] [MC20-03] [MC10L-01] [MC10L-03] [MC2S-01] [MC2S-03]** Maximum weight is 5kg

COG position and size limitation of ancillary equipment

### **[MC12S-01] [MC12S-03]**

In case of MC12S-01/03, maximum working envelope near the front and the back end area of axis 2 can not be secured because of ancillary equipment mounted on forearm, regardless of its size, even when its size was smaller than above limitation.

Single solenoid valve type SYJ3130-5GS [SMC]

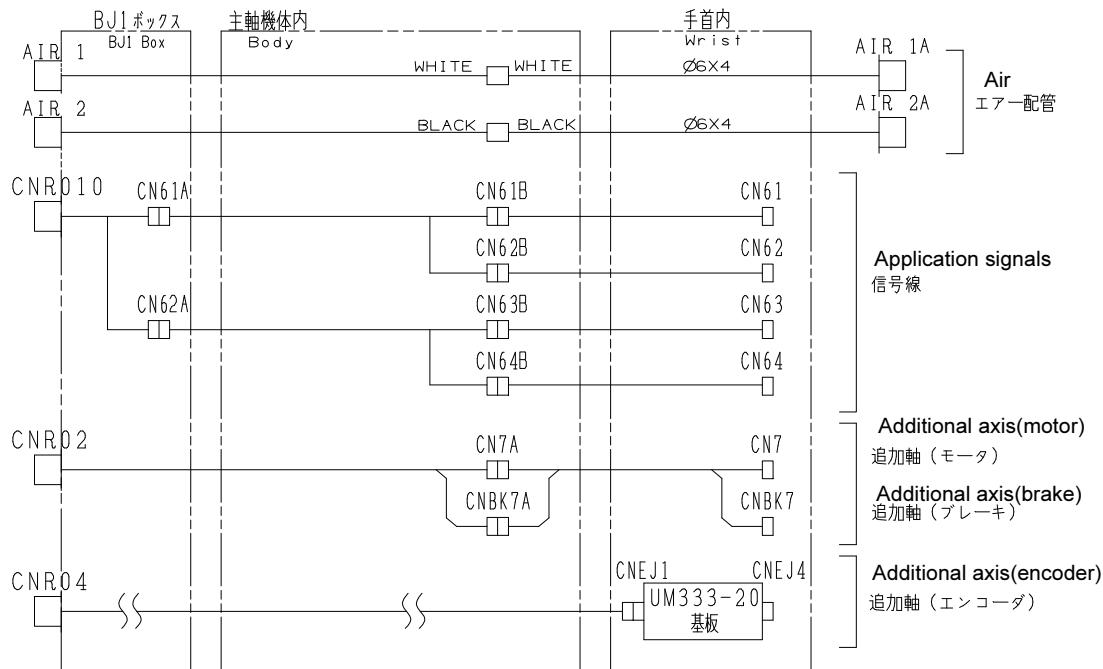

Double solenoid valve type SYJ3230-5GS [SMC]

\*3; Transporting jig is accessory as standard. If another transporting jig is needed to transport the robot, please order KP-ZJ-005 (although not written in above list) to Nachi service.

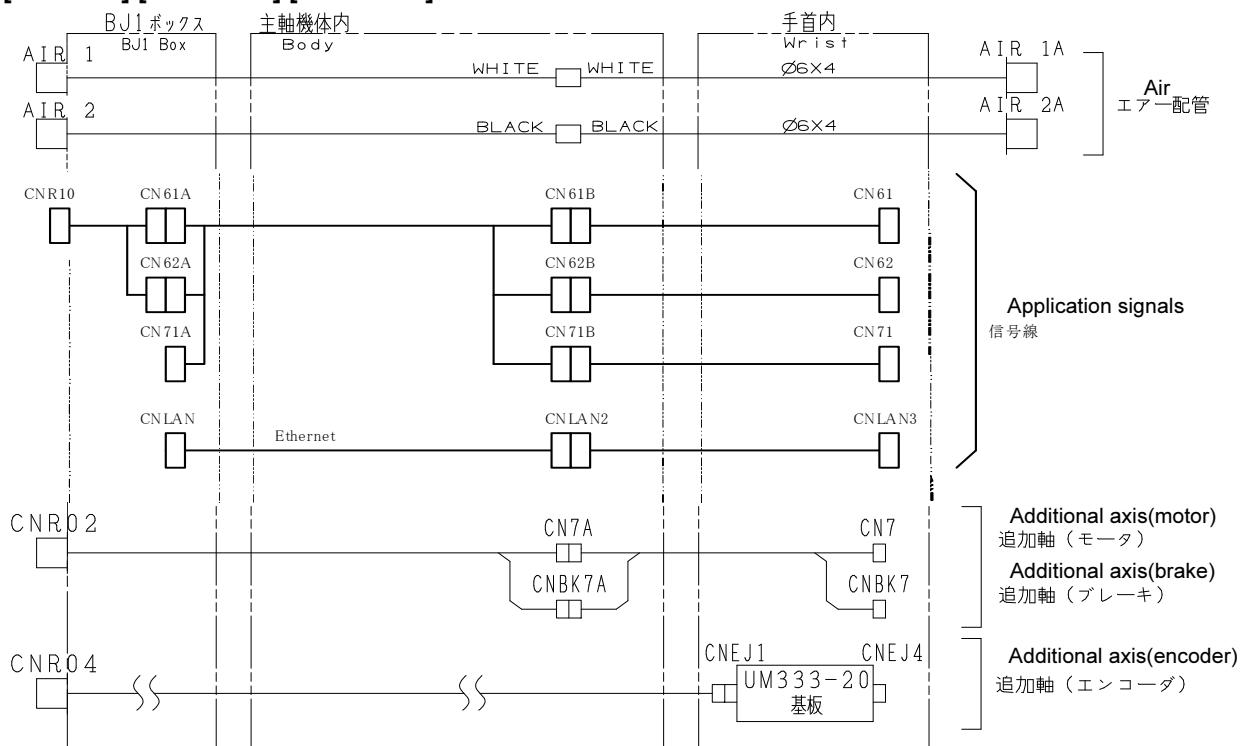

\*4; These parts are packed separately from the robot. (Not attached on the robot)

## 8. Application wiring and tubing diagram (standard)

### ■ Wiring and tubing system diagram [MC20-01] [MC10L-01] [MC12S-01]

### [MC20-03] [MC10L-03] [MC12S-03]

For additional axis encoder, it is necessary to use a bus-connection type encoder that is designated by NACHI. For more details, please contact our technical department.

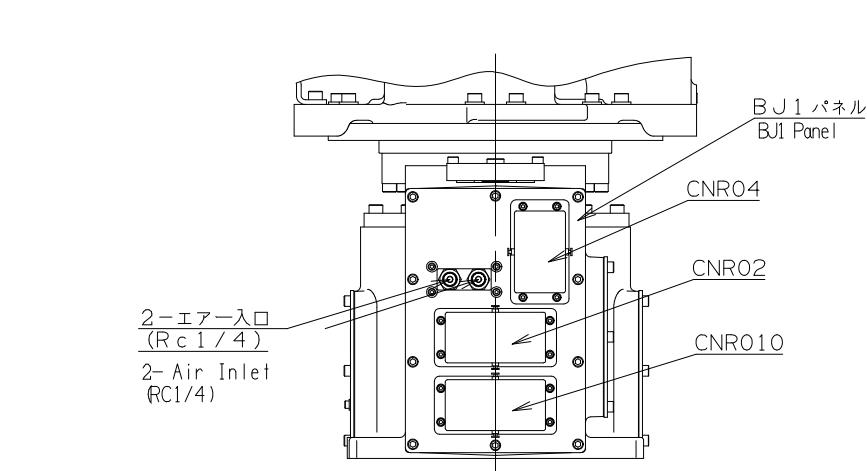

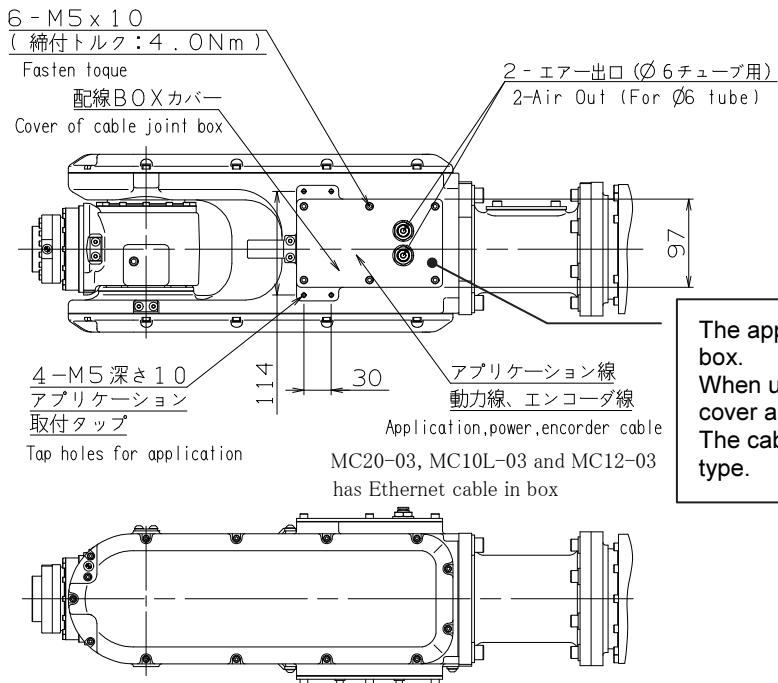

■ Detailed diagram of the base frame

CAUTION

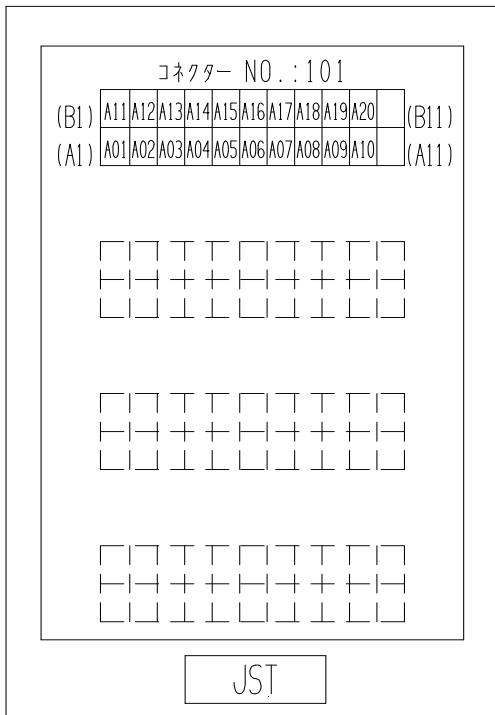

- When not using air, attach plugs to the air in/out holes so that water or oil can not get into the robot arm. (The plugs are attached when the robot is shipped)
- When attaching air valves or cable brackets etc., please use "Tap holes for application (4-M5)" shown in the figure. Tightening those things with the cover fixing bolts or making holes on the box cover itself may cause water leakage or oil leakage into the arm and the parts of the robot may be damaged.

## 9. Transport procedure

### Safety measures against transport

The following describes precautions for transporting the robot. Fully understand the precautions for safe transport work.

 <b>WARNING</b>	The robot must be transported by personnel who have licenses required for slinging work, crane operation, forklift truck operation, and others.
 <b>WARNING</b>	To lift the robot or the controller, follow the procedures specified in the Maintenance Manual. Following any procedures other than those specified will cause the robot to topple over or drop during transport, thus resulting in accidents.
 <b>CAUTION</b>	During transport or installation work of the robot, pay utmost care not to cause damage to wirings. Furthermore, after installing the robot, take protective measures such as using protective guards so that the wirings will not be damaged by workers or other persons, or forklift trucks or else.

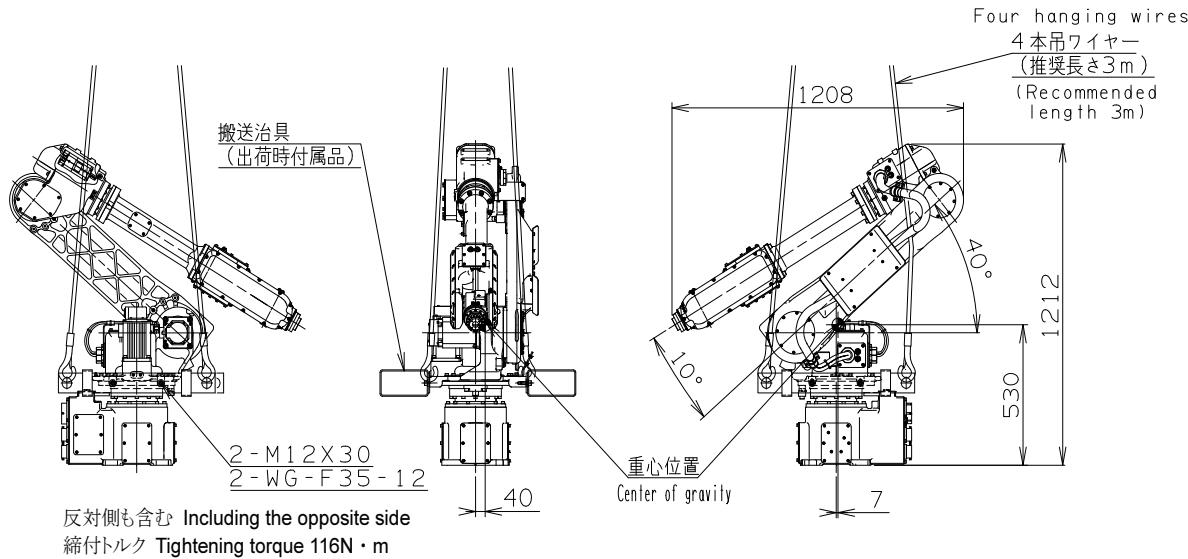

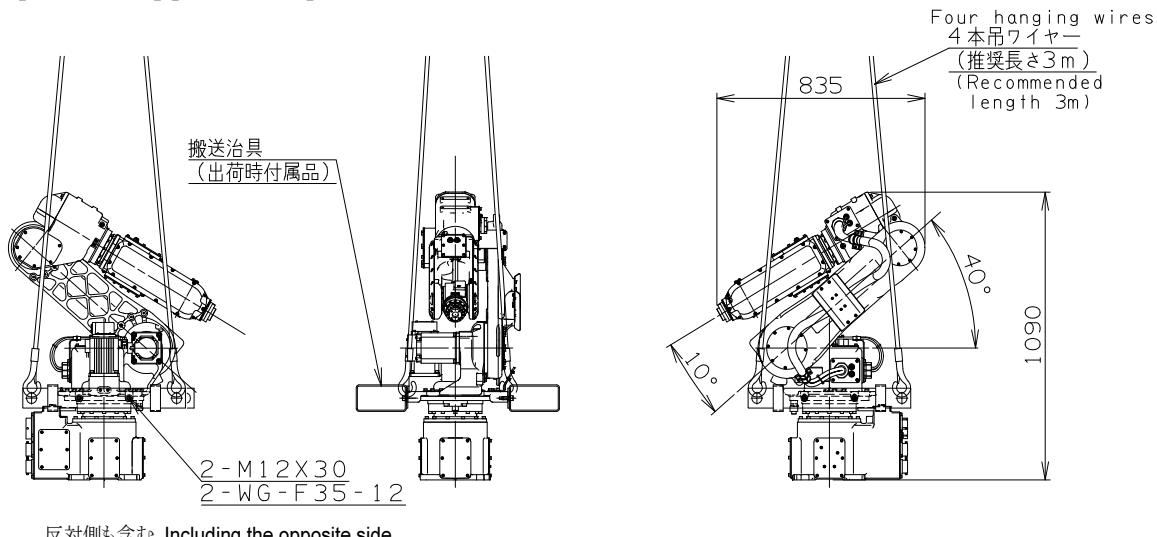

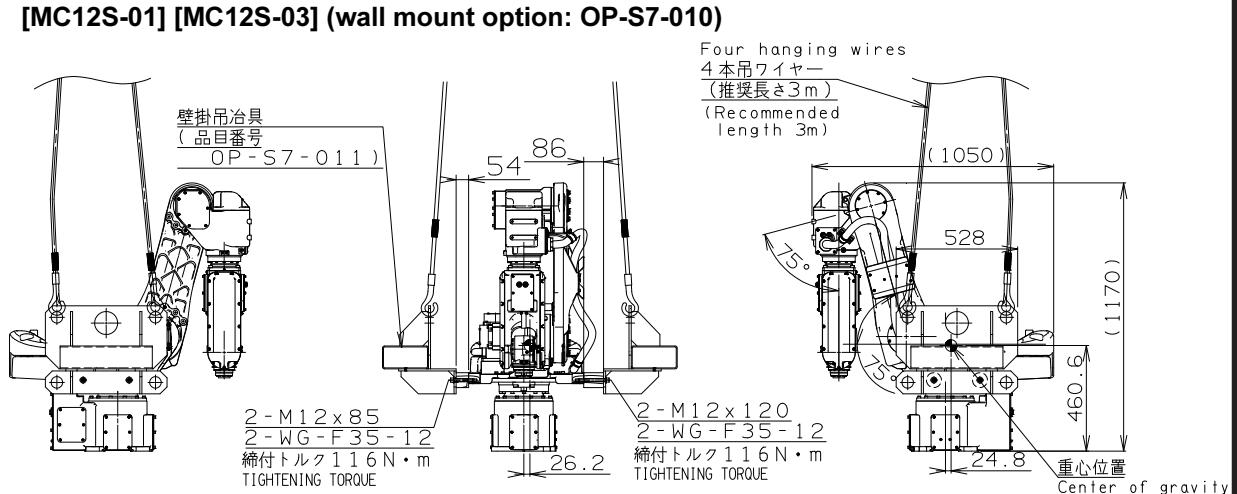

To transport the robot, make it a rule to use a crane.

First, put the robot into the configuration shown below and mount the two carrier brackets dedicated to the transport of the robot to both sides of the robot frame. Then, lift the robot using four hanging wires. Fix these dedicated brackets with the two M12 X 30 bolts. The tightening torque is 116 N·m. Recommended length of the hanging wires is 3 m.

In case that wall mount option is selected, wall mount hanging jig (OP-S7-011) has to be used instead of the hanging jig (accessory when shipped) with using two M12x85 bolts and two M12x120 bolts.

### [MC20-01] [MC20-03]

**[MC10L-01] [MC10L-03]****[MC12S-01] [MC12S-03]****[MC12S-01] [MC12S-03] (wall mount option: OP-S7-010)**

## 10. Installation (specification which contains a robot)

### 1. Delivery condition

Because the expense is different, which form to choose be sufficiently examined.

Style	Condition	Details
1	Delivery on the truck	Robot is delivered on the truck near the entrance of customer's plant.
2	Delivery after installation and test-run	Robot is installed and test-run done.
3	Delivery after installation and test-run with work piece	After style 2, teaching with work piece is done.

### 2. Operation and maintenance education

The special spot operation guide and the special spot preservation guide are the outside of the estimation. Also, there is schooling system in the Toyama factory, too.

Consult with each NACHI-FUJIKOSHI office for the details.

### 3. The type D grounding (the grounding resistance is $100\Omega$ or less) is necessary.

## 11. Consuming power (Robot + Controller)

1.7 kVA (peak)

## 12. Paint color

Standard color	Controller cabinet	Munsell 10GY9/1
	Robot body	Munsell 10GY9/1

Water proof coolant paint option is useful for the circumstance such as that coolant splashes on robot body. Please refer to "7 Option specifications" for the type of this option.

## 13. Warranty

Elapse of 1 year after delivery.

The specifications and appearances in this document might change without a previous notice for the improvement.
